

Practise

Activity 1

With a family member, exchange amounts of coins for others that make the same value, but using different coins.

For example:

10p = 2p, 2p, 5p, 1p

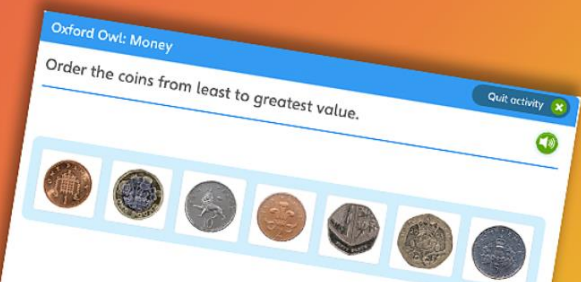

Practise giving change with different amounts.

Remember

Learn the value of each coin. Some smaller coins are worth more than larger coins, like a 10p coin is smaller than a 2p coin, but is greater in value.

Activity 2

Can you put coins in order of value from least to greatest? This interactive exercise was created by [Oxford Owl, Oxford University Press](#) .
